- **Other Tools**: Kafka, Grafana, Prometheus, Eureka, CentralConfigServer.

Employment History:

Currently Working in ITC InfoTech as Associate IT Consultant (Aug 29 2017– Till date).

Project Experience:

Project 1:
E2E Portal

Santander has embarked on a transformation journey to create loosely coupled, highly scalable and self-contained systems. This needs project teams to be independent and have an option of self service for each and every demand of the project right from creating a request for the project to initiation, monitoring and infrastructure automation. This triggers a need for developing an end to end portal at enterprise level to offer the users self-service features within the key areas of Demand Management, Project Delivery and Dashboard for projects running in Santander.

Duration: November 2017 – April 2018

Role: Full stack developer

Team size: 6

Domain: Banking

Client: Santander(UK)

Responsibilities
- Involved in the UI design and implementation.
- Developed one module using Html, JQuery, bootstrap and Thymeleaf framework.
- Took part in designing and implementing rest API endpoints using Spring boot.
- Writing client-side validations using JavaScript.
- Coding on server-side and creating web-service and wrote business logic in model classes.
- Developed and configured DAO and Service layers.

Environment
   Html4, Spring Boot, MySQL, Bootstrap3, Jira, Spring Security, SpringDataJPA, JavaScript, JQuery, Git, Jenkins.

Project 2:
Case Portal

Case portal is a supporting portal for the Life core platform through which a customer service executive in an insurance administration office can manage the cases which the user receives. The user will be able to add, edit and delete cases from the system using the portal.

Duration: May 2018 - September 2018

Role: Full stack developer

Team size: 6

Domain: Insurance

Client: Royal Sundaram

Responsibilities
- Involved in the UI design and implementation.
- Developed four components and one module using Angular4.
- Took part in designing and implementing rest API endpoints using Spring boot.
- Involved in writing queries using spring data JPA mongo template with mongo DB as the backend.

Environment
Angular4, Spring Boot, Mongo DB, Bootstrap3, Trello, Angular CLI, Git, Html5, Jenkins.

Open source Projects:

Maverick-APP is used for testing IQ at an organisation level be at school, IT industry etc…. Currently under development using Angular4, Spring Boot, Material Design, MySQL, MongoDB, SparQL, Neo4j, Kafka, Eureka, CentralConfigServer.
